## TEST CONFIGURATIONS

### Input Reflected-Ripple Current Test Setup

Input reflected-ripple current is measured with an inductor Lin and Capacitor Cin to simulate source impedance.

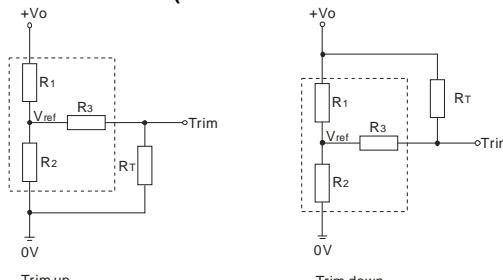

### SENSE USE (REMOTE VOLTAGE COMPENSATION)

## TRIM APPLICATION & TRIM RESISTANCE

Application circuit for TRIM (Part in broken line is the interior of models)

Formula for resistance of Trim

$$\text{up: } R_T = \frac{aR_2}{R_2-a} - R_3 \quad a = \frac{V_{ref}}{V_o - V_{ref}} \cdot R_1$$

$$\text{down: } R_T = \frac{aR_1}{R_1-a} - R_3 \quad a = \frac{V_o - V_{ref}}{V_{ref}} \cdot R_2$$

Note: Value for R1, R2, R3, and Vref refer to the following table.

R<sub>T</sub>: Resistance of Trim

a: User-defined parameter, no actual meanings.

V<sub>O'</sub>: The trim up/down voltage

Parameter \ V <sub>O</sub>	3.3(VDC)	5(VDC)	12(VDC)	15(VDC)	24(VDC)
R1(KΩ)	4.80	2.88	10.97	14.50	24.87
R2(KΩ)	2.86	2.86	2.86	2.86	2.86
R3(KΩ)	15	10	17.8	17.8	20
V <sub>ref</sub> (V)	1.24	2.5	2.5	2.5	2.5

## DESIGN CONSIDERATIONS

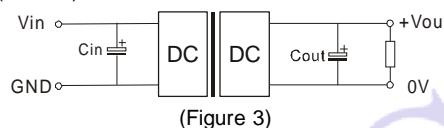

### 1) Requirement on output load

To ensure this module can operate efficiently and reliably, During operation, the minimum output load **could not be less than 10% of the full load**. If the actual output power is very small, please connect a resistor with proper resistance at the output end in parallel to increase the load.

### 2) Recommended circuit

All the VRB\_D-40W series have been tested according to the following recommended testing circuit before leaving factory. This series should be tested under load. Never be tested under no load (see Figure 3).

If you want to further decrease the output ripple, you can increase capacitance properly or choose capacitors with low ESR. However, the capacitance can't exceed the maximum capacitor load in the list (Table 1).

EXTERNAL CAPACITOR TABLE (TABLE 1)

Capacitance Output Voltage	C <sub>out</sub> (μF)	C <sub>in</sub> (μF)(12V,24V, 48V input)
3.3V、5V	220	
12V、15V	100	100
24V	47	

### 3) Cannot use in parallel and hot swap

Note:

1. Operation under minimum load will not damage the converter; However, they may not meet all specification listed.
2. Max. Capacitive Load tested at input voltage range and full load.
3. All specifications measured at Ta=25°C, humidity<75%, nominal input voltage and rated output load unless otherwise specified.
4. In this datasheet, all the test methods of indications are based on our corporate standards.
5. All characteristics are for listed model only, non-standard models may perform differently, please contact our technical person for more detail.
6. Contact us for your specific requirement.
7. Specifications subject to change without prior notice.
